

CONNOR ADAMS

Director of Infrastructure & Automation

Mukilteo, WA 98275 | connor@connoradams.io | connoradams.io | linkedin.com/in/ConnorLAdams | github.com/ConnorLAdams

SUMMARY

Infrastructure and automation leader with a proven record of designing, implementing, and standardizing enterprise cloud environments inside high-throughput logistics operations. Owned the design and execution of cloud architecture, security, and AI/ML infrastructure for the BI/Dev team that helped scale a last mile logistics organization 3× to over \$1B in annual revenue, cutting cloud costs by 20%+ and increase pipeline reliability by 50%. Experienced managing teams & projects that work with cross-departmental infrastructure and building repeatable, governed platforms directly transferable to integrating and scaling IT across newly acquired portfolio companies.

EXPERIENCE

BI Manager — Infrastructure & Automation Lead | *Temco Logistics — Marysville, WA* *Feb 2025 – Present*
Managed a team of BI & ML Developers; Oversaw the BI infrastructure, cloud/network architecture, data governance, and ML/AI initiatives across the company.

- Led full cloud subscription migration (computes, MySQL, centralized Data Lake, web applications) in collaboration with IT and Cyber teams resulting in a reduction of cloud infrastructure costs by over 20%; established automated backups and disaster recovery procedures.
- Architected and led deployment of a Hub & Spoke network with Zscaler App Connectors and Cloudflare tunneling, standardizing secure access for internal teams and third-party platforms.
- Oversaw the initiative to upgrade legacy resources to utilize service principals, governed the Non-Human Identity (NHI) lifecycle, and implemented RBAC across apps, agents, databases and the data lake with the security posture validated by an independent enterprise infrastructure audit as meeting large-enterprise standards.
- Directed deployment of Vector DBs for AI-powered enterprise search, 5 production ML models, and 3 AI agents (anomaly detection, retention prediction, PII classification, knowledge base assistant, and fraud-detection) which allowed Ops leaders entire visibility into their own team which improved onboarding, employee monitoring, and learning & development.

BI Automation & Machine Learning Lead | *Temco Logistics — Marysville, WA* *Apr 2024 – Jan 2025*

- Engineered a private Python library to standardize and scale automation templates company-wide; enhanced security & reliability & simplicity with Dependabot monitoring and automated deployment pipelines.
- Designed and drove adoption of a centralized Database Management System with Unity Catalog and Data Lake, unifying all data sources under one governed platform.
- Delivered OCR models extracting structured data from Statements of Work and Bills of Lading, language-detection, and semantic classification models; drove a 20% lift in customer experience scores and a 60% reduction in driver revisits.

BI Developer | *Temco Logistics — Pomona, CA* *Mar 2023 – Mar 2024*

- Upgraded manual legacy Excel reporting with automated, flexible data pipelines and a single source of truth, scaling data ingestion volume 10x and reducing end-to-end processing time by over 80%.
- Designed normalized database schemas, implemented secure secret management, and established data governance foundations across the data & BI platforms.

PROJECTS

Flux-Compressor (Rust), 2026 — Built an adaptive columnar storage format that is comparable to Parquet on compression ratio across all Arrow data types while matching or exceeding it on decompression throughput; shipped a Spark DataSource V2 connector, Python bindings, and automated multi-platform release pipelines (crates.io, PyPI, Maven Central).

[View Repository →](#)

E-Commerce Websites (Next.js/React), 2026 — Built and deployed full-stack, customer-facing e-commerce sites (Next.js/React on Shopify's headless Storefront API, hosted on Vercel) with Neon Postgres + Drizzle ORM, Upstash Redis, GA4 + Microsoft Clarity analytics, and Sentry error tracking; features include webhook-driven inventory sync, and GDPR/CCPA-compliant consent logging.

EDUCATION

M.S. Applied Mathematics — Cal Poly Pomona, 2022

B.S. Applied Mathematics — Cal Poly Pomona, 2020

TECHNICAL SKILLS

Cloud & Security: Azure, GCP, AWS, Zscaler, Cloudflare, Vercel, NordVPN, Tailscale Orca, Microsoft Clarity, Sentry, GitHub Advanced Security

DevOps: Terraform, Bicep, Kubernetes, Docker, GitHub Actions, Jenkins, Dependabot, Azure Devops

Languages / Frameworks: Python, Go, Rust, C, Matlab, R, SQL, NextJS, ReactJS, VueJS

Data: MySQL, PostgreSQL, Databricks, MongoDB, NeonDB, Upstash, Redis
